GIANT VOICE AND OUTDOOR MASS NOTIFICATION

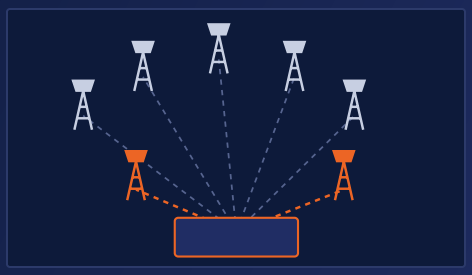

# Giant Voice Expansion: Seven Sites, One Alert Console

**Air Force base, prime**

The challenge: an Air Force base with five Giant Voice towers needed two more to cover new buildings, and all seven had to work as one encrypted network. The fix: Inspired Solutions built the two new towers, upgraded the radios on the five existing towers, and tied all seven to the same alert console.

8(A) / SDVOSB / WOSB / EDWOSB / MBE / WBE / DBE / SWAM / ISO 9001:2015

ONE SYSTEM, SEVEN SITES

5 existing towers
2 new towers, encrypted radio

| 2 | 7 | 16 |
|---|---|---|
| new towers built | sites on one alert system | base messages verified |

## Plan it. Build it. Tie it in.

WHAT WE DELIVER

### Plan and permit

Site survey, sound coverage mapping, and every approval the towers need before ground is broken.

Dig permit, environmental review, FAA height filing, soil testing

### Build the towers

Towers, speakers, and power that stand up to the weather and keep sounding when the power grid is not there.

Solar power with battery backup, lightning protection, red warning beacons for helicopters

### Tie in and test

New sites join the system and radio network you already run, under a cutover plan that keeps the existing towers in service.

Encrypted radio control, sound and silent testing, operator training

## Proof: a Department of War Air Force base.

PAST PERFORMANCE

### Giant Voice expansion, Inspired Solutions as prime

- The base rated our management Exceptional under our base contract, two years running.
- Added two new Giant Voice towers to the base's five-tower system, so all seven sites now answer to one alert system.
- Surveyed both sites and mapped speaker coverage to a 2,000-foot radius per tower.
- Connected the new towers to the base's alert console and radio network over an encrypted link, and added radios at the five existing sites so every site takes the same command.
- Wrote the cutover plan. The base accepted all 16 alert and ceremony messages, from tornado warnings to Reveille and Taps.
- Sound-tested off site before install, trained base operators, and restored both tower sites. The base signed off on training, land restoration, and both towers.

### Schedule

- **November 17, 2025**
  Kickoff with the base
- **Dec 2025 to Jan 2026**
  Cutover plan and messages accepted; FAA filing; dig permit; soil testing
- **March 6 and April 15, 2026**
  Tower design accepted; off-site sound test
- **Early June 2026**
  Both towers erected
- **July 2026**
  All seven sites on radio and tested with base technicians

### Problems we solved

**A permit stuck in a queue**
The dig permit stalled in a new base system. We walked it through every office until it was approved.

**No grid power at the sites**
The base chose solar only. We designed solar power with battery backup for both towers.

**Towers near the flight limit**
We filed with the FAA early. Height clearance was confirmed with the towers within six inches of the limit.

**Radios not plug and play**
Base radios had mismatched software. We returned with factory support and got all seven sites online.
